

Ivory 20"x20" (508x508mm)

Honey 20"x20" (508x508mm)

Noce 20"x20" (508x508mm)

**DESCRIPTION**

Onyx is not what you think. True onyx is formed from quartz and is very hard and durable, much like granite. However, most commercially sold "onyx" is actually formed of calcite which is the major constituent of limestone and travertine meaning it's much less durable and not suitable for many applications. But that does not detract from its jaw-dropping beauty and high price tag. With our porcelain Onyx series you can enjoy the incredible depth of color and luxurious warmth reminiscent to mother nature's counterpart without having to worry about durability issues or high prices. You can't lose.

**INSTALLATION + MAINTENANCE**

Onyx may be installed using standard ceramic tile installation methods and materials, as recommended by the Tile Council of America (TCA). Eleganza sales representative will advise you on general installation questions.
